Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

On Sep 1, 1999 this sequence version replaced gi:5757565.  
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email  
[gc-help@bcm.tmc.edu](mailto:gc-help@bcm.tmc.edu)  
CLONE LENGTH: This sequence does not necessarily represent the  
entire insert of this clone. Overlapping regions of clones are only  
sequenced and submitted once, so the sequence for the remainder of  
the insert may be found in the record for the adjacent clones.  
Overlapping clones are noted at the beginning and end of the  
Features listing.  
ANNOTATION OF FEATURES:  
STSs are identified using ePCR (Genome Res. 7:541-550) searches  
of a local database that includes entries from dbSTS, GDB, and  
local mapping efforts.  
Repeats are identified using RepeatMasker (A. Smit and P. Green,  
unpublished.) for Human and Mouse sequences.  
Genes and region of sequence similarity are identified by BLAST  
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the  
EST and cDNA sequences. Genes demonstrate at least two exons  
flanked by consensus splice sites that maintained sequence  
continuity across the splice junctions. Sequences that are not  
identical matches are annotated as similar.  
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum  
standard of double strand coverage with a minimum of 2 clones and 2  
reads with no ambiguities or 2 chemistries with a minimum of 2  
clones and 3 reads with no ambiguities. If the sequence quality for  
a region does not meet this standard, it will be indicated in the  
annotation as Low Coverage.  
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality  
standards - estimated error rate less than 1 per 10,000 bases.  
Reports of lowest quality individual bases and measures of base  
quality are listed below. Description of the metrics can be found  
at URL:  
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

----- Genome Center
Center: NIH Intramural Sequencing Center
Center code: NISC
Web site: http://www.nisc.nih.gov
Contact: nisc_zoo@hgri.nih.gov
----- Project Information
Center project name: gpg
Center clone name: 037007
The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid, n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 223254 bases at least Q40
Consensus quality: 223828 bases at least Q30
Consensus quality: 223915 bases at least Q20
Insert size: 233000; agarose-fp
Insert size: 223953; sum-of-contigs
Quality coverage: 11.53x in Q20 bases; agarose-fp
Quality coverage: 12.00x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 8440: contig of 8440 bp in length
* 8441: gap of unknown length
* 21103: contig of 12563 bp in length
* 8541
* 21104: gap of unknown length
* 21203: contig of 15125 bp in length
* 36328: gap of unknown length
* 36329
* 36428: gap of unknown length
* 36429
* 45563: contig of 9135 bp in length
* 45564
* 45663: gap of unknown length
```

Assembly program: Phrap: version 990315  
 Consensus quality: 200171 bases at least Q40  
 Consensus quality: 200668 bases at least Q30  
 Consensus quality: 200809 bases at least Q20  
 Insert size: 201600; sum-of-contigs  
 Quality coverage: 6.5x in Q20 bases; sum-of-contigs

\* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 6 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

\* 1 1070: contig of 1070 bp in length  
 \* 1170: gap of unknown length  
 \* 1171 12362: contig of 11192 bp in length  
 \* 12363 12462: gap of unknown length  
 \* 12463 42432: contig of 29970 bp in length  
 \* 42433 42532: gap of unknown length  
 \* 42533 76804: contig of 34272 bp in length  
 \* 76805 76904: gap of unknown length  
 \* 76905 140534: contig of 63630 bp in length  
 \* 140535 140635: gap of unknown length  
 \* 140635 202050: contig of 61416 bp in length.

-----

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C\_elegans/wormpep RP23-32L6 is from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong.

For further details see http://www.chori.org/bacpac/home.htm  
VECTOR: pBACe3.6.

Contact: hpgc@medel.mgh.harvard.edu

-----Summary Statistics

Center project name: AAY

Sequencing vector: pUC18; L08752

Chemistry: Dye-terminator Big Dye; 100%

\*Consensus quality: 194428 at least Q20

\*Consensus quality: 191055 at least Q30

\*Consensus quality: 185439 at least Q40

Estimated insert size: agarose-FP - N/A

\*\*Estimated insert size: 202897 - sum-of-contigs

Quality coverage: agarose-FP - N/A

Quality coverage: 4.3 x in Q20 bases; sum-of-contigs estimation

-----

\* NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. \* This record will be updated with the finished sequence. \* as soon as it is available and the accession number will be preserved.

C. elegans Sequencing Consortium
Genome sequence of the nematode C. elegans: a platform for
investigating biology
Science 282 (5396), 2012-2018 (1998)
9851916
2 (bases 1 to 21062)
Sulston,J.E.
Direct Submission
Submitted (19-JAN-2006) Nematode Sequencing Project, Sanger
Institute, Hinxton, Cambridge CB10 1SA, England and Department of
Genetics, Washington University, St. Louis, MO 63110, USA. E-mail:
worm@sanger.ac.uk
Coding sequences below are predicted from computer analysis, using
predictions from GeneFinder (P. Green, U. Washington), and other
available information.
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
overlap between neighbouring submissions.
For a graphical representation of this sequence and its analysis
see: - http://www.wormbase.org/perl/ace/elegans/seq/sequence?
names=VY10G11R;class=Sequence
IMPORTANT: This sequence is not the entire insert of clone
VY10G11R. It may be shorter because we only sequence overlapping
sections once, or longer because we arrange for a small overlap
between neighbouring submissions.
The start of this sequence (1..92) overlaps with the end of
sequence At161711.
The end of this sequence (20948..21062) overlaps with the start of
sequence At132952.

except on the rare occasion of the clone being a YAC.  
RP11-54H19 is from the library RPCI-11.1 constructed by the group  
of Pieter de Jong. For further details see  
<http://www.chori.org/bacpac/home.htm>  
VECTOR: pBACe3.6.

Bovine Genome Sequencing Consortium

Direct Submission

Submitted (24-JAN-2006) Human Genome Sequencing Center, Department  
 of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA

On Jan 24, 2006 this sequence version replaced gi:82569398.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

 ----- Project Information  
 Center project name: FOOA  
 Center clone name: CH240-250J10  
 ----- Summary Statistics  
 Assembly program: Atlas 3.0;  
 Consensus quality: 150753 bases at least Q40  
 Consensus quality: 152702 bases at least Q30  
 Consensus quality: 154389 bases at least Q20  
 Estimated insert size: 153285; sum-of-contigs estimation  
 Quality coverage: 6x in Q20 bases; sum-of-contigs estimation  
 -----  
 \* NOTE: Estimated insert size may differ from sequence length  
 \* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html):  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 16 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

## JOURNAL

Submitted (31-JUL-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Jul 31, 2001 this sequence version replaced gi:15029434.  
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email [gc-help@bcm.tmc.edu](mailto:gc-help@bcm.tmc.edu)

## COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

## ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:  
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

TITLE	Direct Submission				
JOURNAL	Submitted (08-OCT-2002) Human Genome Sequencing Center, Department				

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA	
On Sep 19, 2002 this sequence version replaced gi:21737852.	
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Summary Statistics
Assembly program: XGAP4; version 4.5
Chemistry: Dye-terminator; 100% of reads
Consensus quality: 138778 bases at least Q40
Consensus quality: 138874 bases at least Q30
Consensus quality: 138966 bases at least Q20
Insert size: 139309; sum-of-contigs
Insert size: 166839; 1.5% error; agarose-ff
Quality coverage: 8.53x in Q20 bases; sum-of-contigs Quality
coverage: 7.17x in Q20 bases; agarose-ff
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1 12730: contig of 12730 bp in length
* 12731 12830: gap of 100 bp
* 12831 43204: contig of 30374 bp in length
* 43205 43304: gap of 100 bp
* 43305 139509: contig of 96205 bp in length.

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-321C9 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm

NOTICE
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.
MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu
SOURCE INFORMATION:
The RPCI-24 BAC Library has been constructed by Pieter de Jong and
coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
and/or brain genomic DNA. The clone and detailed information can be
obtained from Pieter de Jong and coworkers at http://www.chori.org
NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

3 (bases 1 to 194709)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23908481.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Assembly program: Phrap; version 0.990329
Consensus quality: 188047 bases at least Q40
Consensus quality: 189447 bases at least Q30
Consensus quality: 190412 bases at least Q20
Estimated insert size: 195068; sum-of-contigs estimation

```

```

-----
Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
* NOTE: Estimated insert size may differ from sequence length
  (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
  consists of 1 contigs. Gaps between the contigs
  are represented as runs of N. The order of the pieces
  is believed to be correct as given, however the sizes
  of the gaps between them are based on estimates that have
  provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 194709: contig of 194709 bp in length.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (12-OCT-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Oct 12, 2002 this sequence version replaced gi:21700469.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Direct Submission
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:24942666.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Rat Genome Sequencing Consortium.  
Direct Submission

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

## TITLE

Submitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

## COMMENT

On Nov 9, 2002 this sequence version replaced gi:23264550.  
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 Fax: 6172580903

Email: mczody@broad.mit.edu  
 Primer A: No sequence submitted  
 Primer B: No sequence submitted  
 STS size: 770

Protocol:  
 23,021,928 chimpanzee whole genome shotgun reads were aligned to  
 the Human genome NCBI  
 Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,  
 including Clint (Pan  
 troglodytes verus), 3 other Pan troglodytes verus chimps  
 (Donald, Karlén, Yvonne), 3 Pan  
 troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps  
 of unknown origin  
 (Gon, Unknown Chimp). Common names: Pan troglodytes verus is the  
 western chimp and Pan  
 troglodytes troglodytes is the central chimp. To be included in  
 chimpanzee SNP discovery, a  
 read must be at least 500bp in length, at least 50% of its base  
 calls must have Phred  
 score >= 20, at least 30% of its base calls must satisfy  
 SNQS(30,25) (single strand NQS, the  
 base in question has Phred score >= 30, the surrounding 10 bases in  
 the read have Phred  
 score >= 25), and the read must have at least 200 bp SNQS(30,25)  
 bases. Reads not uniquely  
 placed in the genome and read pairs whose two ends were not

            * NOTE: This record contains 54 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
```

chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Oseawa and Minako Tatenio in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

Rat Genome Sequencing Consortium.

#### Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23664503.

The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

----- Project Information

Center project name: G10F

Center clone name: CH230-156A5

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 199732 bases at least Q40

Consensus quality: 201456 bases at least Q30

Estimated insert size: 212927; sum-of-contigs estimation  
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 1 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
1 219121: contig of 219121 bp in length.

XX XX New nucleic acid molecule encoding a human G-protein coupled receptor.  
XX PT RAI3, useful for preventing, treating or ameliorating chronic obstructive

PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms  
of COPD.

XX Disclosure; SEQ ID NO 33; 301pp; English.

XX The present sequence is that of DNA encoding a peptide corresponding to  
amino acids 340-353 of a human G-protein coupled receptor, denoted  
retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was  
identified in studies of RAI-3 phosphorylation in response to cigarette  
smoke. Primers based on this sequence can be used in a PCR to identify  
individuals at risk for developing chronic obstructive pulmonary disease  
(COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed  
with tyrosine phosphorylated proteins only in cells that have been  
exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung  
tissue, and since cigarette smoke is a major causative factor of COPD,  
RAI-3 provides a novel cellular target for identifying modulators, e.g.  
agonists or antagonists, useful for the treatment and/or prevention of  
COPD and related disorders such as emphysema and chronic bronchitis. RAI-  
3 modulators, e.g. agonists and antagonists, especially antisense  
compounds, can be used to treat COPD and other disorders an diseases  
associated with regulation of NF-kB and/or its associated or interacting  
signaling molecules. Single nucleotide polymorphisms (SNPs) detected in  
the RAI-3 gene are useful for determining COPD association in  
individuals. RAI-3 nucleic acid molecules and polypeptides are useful for  
preventing, treating or ameliorating disorders related to aberrant GPCR  
signaling or cell cycle regulation, pulmonary disorders, inflammatory  
lung disorders, COPD, the underlying symptoms of COPD, COPD-related  
disorders or conditions, autoimmune disorders, disorders related to  
hyperimmune activity, inflammatory conditions, disorders related to  
aberrant acute phase responses, hypercongenital conditions, birth  
defects, necrotic lesions, wounds, organ transplant rejection, renal  
diseases, ischaemia-reperfusion injury, heart disorders, disorders  
related to aberrant signal transduction, proliferation disorders,  
cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,  
ulcerative colitis, cerebral infarct, myocardial infarct, diabetic  
nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,  
rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,  
pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,  
colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders  
associated with aberrant cell adhesion, I-CAM function and/or regulation,  
E-selectin function and/or regulation, or aberrant NF-kB function and/or  
regulation (all claimed).

XX New isolated nucleic acids and polypeptides capable of eliciting a
XX humoral and/or cellular immune response, useful for diagnosing,
XX preventing or treating cancer, particularly colon cancer.
XX Claim 1; SEQ ID NO 1937; 87pp; English.
XX The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
XX an expression vector comprising the polynucleotide, (ii) a host cell
XX transformed or transfected with the expression vector, (iii) an isolated
XX antibody, or its antigen-binding fragment, which specifically binds to
XX the polypeptide, (iv) a method of detecting or determining the presence
XX of cancer in a patient, (v) a fusion protein comprising at least one of
XX the polypeptides, (vi) an oligonucleotide that hybridises to the
XX polynucleotide sequence under highly stringent conditions, and (vii) a
XX method of stimulating and/or expanding T cells specific for a tumour
XX protein. The polypeptide specifically comprises the amino acid sequence
XX of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
XX frames (ORFs) of C636S. These polypeptides are encoded by the
XX polynucleotide sequences, where both are capable of eliciting a humoral
XX and/or cellular immune response. The polynucleotides, polypeptides, and
XX antibodies are useful for diagnosing, preventing or treating cancer,
XX particularly colon cancer. The polynucleotide and polypeptide sequences
XX are also useful in DNA strand invasion, antisense inhibition, mutational
XX analysis, nucleic acid purification, isolation of transcriptionally
XX active genes, blocking or transcription factor binding, genome cleavage
XX or in situ hybridisation, and as enhancers of transcription or
XX biomarkers. This sequence represents a human colon cancer associated
XX cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

XX Novel human proteins having hydrophobic domains used for research and  
PT diagnostic purposes.  
XX  
XX  
PS Claim 3; Page 88; 117pp; English.  
XX  
CC This sequence represents the hydrophobic domain containing protein, clone  
CC HP10549 coding region. The sequence is isolated from a human stomach  
CC cancer cell line. The invention relates to human proteins with  
CC hydrophobic domains, the DNA and the cDNA encoding them. The  
CC polynucleotides and proteins are predicted to have biological activities  
CC which make them suitable for treating, preventing or ameliorating medical  
CC conditions in humans and animals. Suggested activities include  
CC nutritional activity (nutritional source or supplement); cytokine and  
CC cell proliferation/differentiation activity; immune stimulating (e.g. as  
CC vaccines) or suppressing activity (e.g. to treat various immune  
CC deficiencies such as AIDS or HIV, connective tissue disease, systemic  
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary  
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin  
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease  
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and  
CC organ transplantation); haematopoiesis regulating activity (e.g. in  
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth  
CC activity (e.g. wound healing and tissue repair, ulcers, burns,  
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic  
CC activity; haemostatic and thrombolytic activity (e.g. treating  
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and  
CC tumour inhibition activity. The polynucleotides are also stated to be  
CC useful for gene therapy. Other activities include inhibiting infections  
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,  
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,  
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;  
CC treatment of depression; treatment of pain; hormonal or endocrine  
CC activity. The polynucleotides may also be used for recombinant expression  
CC of the protein

PT New isolated nucleic acid that is differentially expressed in cancer  
PT tissues useful for determining the presence of colon cancer in a cell or  
PT tissue type, and in antisense therapy.  
XX  
XX Claim 1; Fig 1; 796pp; English.  
XX  
CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially  
CC expressed in cancer tissues. ABQ78993 to ABQ79004 represent proteins  
CC encoded by the ABQ60787 to ABQ60787 nucleic acid sequences. (I) can be  
CC used in antisense therapy. An antibody immunoreactive with a polypeptide  
CC encoded by (I) is useful for detecting cancer in a patient sample and  
CC for detecting the presence or absence of a polynucleotide encoded by a  
CC nucleic acid which hybridises to (I) in a cell. A probe/primer derived  
CC from (I) can be used for determining the presence of a nucleic acid which  
CC hybridises to (I), and for determining the phenotype of cells in a sample  
CC of cells from a patient. (I) is useful for determining the presence of  
CC colon cancer in a cell or tissue type, for determining the presence or  
CC state of other type of cancer, in antisense therapy, to generate  
CC macroarrays on a solid surface, to identify a chromosome on which the  
CC corresponding gene resides, and in tissue profiling, forensics, genetic  
CC analysis, mapping and diagnostic applications. (I) can be used to raise  
CC antibodies, and to screen for peptide analogues and antagonists

useful for evaluating a patient before, after or during therapy, to evaluate the reduction in a tumour burden. The breast cancer marker gene proteins are useful as immunogens for raising antibodies, by immunising a mammal with a breast cancer marker protein. The marker proteins are useful as bait proteins in a two-hybrid or three-hybrid assay, to identify other proteins which bind to or interact with the marker proteins. The breast cancer marker genes are useful as surrogate marker genes for one or more disorders, disease states or conditions leading to disease states, in particular, breast cancers. The breast cancer marker genes are useful as pharmacodynamic marker genes. An antibody which selectively binds to a protein of a breast cancer marker gene is useful for treating cancers, particularly breast cancers. The host cell of the invention is useful for producing non-human transgenic animals. This polynucleotide sequence represents one of the breast cancer marker genes of the invention

XX
PT Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT to tumor-associated antigenic target polypeptide, useful for diagnosing
PT or treating cancer.
XX
XX Claim 1; SEQ ID NO 64; 96pp; English.
XX
CC This invention relates to a novel isolated antibody, for example anti-E16
CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC target polypeptide (TAT) and that lacks an associated signal peptide
CC sequence. The invention may be useful for the development of compounds
CC with a cytostatic activity acting as antagonists of the TAT188
CC polypeptide or RNA interference whilst the disclosed sequences may be
CC useful for gene therapy. The invention is useful for inducing the death
CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC inhibiting proliferation or promoting cell death of a cell expressing
CC TAT188. In addition, the invention may be useful for detecting the level
CC of TAT188 polypeptide in a test cell relative to a control cell, or
CC treating or preventing a cell proliferative disorder associated with
CC increased expression of TAT188. The novel antibody of the invention is
CC useful for inhibiting the growth of a cancer cell and may be useful for
CC diagnosing or treating cancer. The present sequence is that of the human
CC TAT143 cDNA which encodes a protein against which an antibody of the
CC invention may be targeted.

XX Example 5; Page 126-127; 128pp; English.
XX
CC The present sequence encodes a human RECAP (receptors and associated
CC proteins) polypeptide. RECAP polynucleotides and polypeptides are useful
CC in the diagnosis, treatment and prevention of neurological disorders such
CC as stroke, Alzheimer's disease, Pick's disease, Huntington's disease,
CC dementia, Parkinson's disease, Down's syndrome, amyotrophic lateral
CC sclerosis, multiple sclerosis, bacterial and viral meningitis, CJD
CC (Creutzfeldt-Jakob disease), GSS (Gerstmann -Straussler-Scheinker
CC syndrome); immunological disorders, including autoimmune/inflammatory
CC disorders such as AIDS, Digeorge's syndrome, severe combined
CC immunodeficiency disease (SCID), Chediak-Higashi syndrome, Cushing's
CC disease, Addison's disease, autoimmune thyroiditis, Crohn's disease,
CC diabetes mellitus, Good pasture's syndrome, gout, Grave's disease,
CC Hashimoto's thyroiditis, Sjogren's syndrome, Werner's syndrome, viral,
CC bacterial, fungal, parasitic, protozoal, and helminthic infections; and
CC cell proliferation disorders such as arteriosclerosis, atherosclerosis,
CC cirrhosis, hepatitis and cancer

PT Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
```

XX PS Claim 4; Page 111-113; 117pp; English.

XX CC This sequence represents the hydrophobic domain containing protein, clone

CC HPI0549 nucleotide sequence. The sequence is isolated from a human

CC stomach cancer cell line. The invention relates to human proteins with

CC hydrophobic domains, the DNA and the cDNA encoding them. The

CC polynucleotides and proteins are predicted to have biological activities

CC which make them suitable for treating, preventing or ameliorating medical

CC conditions in humans and animals. Suggested activities include

CC nutritional activity (nutritional source or supplement); cytokine and

CC cell proliferation/differentiation activity; immune stimulating (e.g. as

CC vaccines) or suppressing activity (e.g. to treat various immune

CC deficiencies such as AIDS or HIV, connective tissue disease, systemic

CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary

CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin

CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease

CC and autoimmune inflammatory eye disease, as well as asthma, allergies and

CC organ transplantation); haematopoiesis regulating activity (e.g. in

CC treatment of myeloid or lymphoid cell deficiencies); tissue growth

CC activity (e.g. wound healing and tissue repair, ulcers, burns,

CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic

CC activity; haemostatic and thrombolytic activity (e.g. treating

CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and

CC tumour inhibition activity. The polynucleotides are also stated to be

CC useful for gene therapy. Other activities include inhibiting infections

CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,

CC malaria); affecting bodily characteristics such as, e.g. weight, colour,

CC skin, affecting biorhythms or circadian cycles; enhancing fertility;

CC treatment of depression; treatment of pain; hormonal or endocrine

CC activity. The polynucleotides may also be used for recombinant expression

CC of the protein

XX PT Transformation of cells with a fusion protein of an orphan receptor

PT protein with a fluorescent protein useful for identification of ligands

PT to the orphan receptor.

XX PS Example 4; SEQ ID NO 196; 594pp; Japanese.

XX CC This invention relates to a novel method of identifying ligands to an

CC orphan receptor protein which comprises transforming cells with DNA

CC encoding a fusion protein of the orphan receptor with a fluorescent

CC protein, so that the fusion protein is expressed in the cells (or cell

CC membranes isolated from them) and contacting the cells with the potential

CC ligand to be tested. A suitable fluorescent protein for incorporation in

CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,

CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the

CC identification of ligands binding to an orphan receptor protein.

Screening, diagnosing and/or treating carcinoma, including breast, pancreatic, lung, liver, ovarian and colon cancer by detecting the change in expression or activity of an RAIG1 polypeptide or encoding nucleic acid molecule.

CC This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.  
 CC RAIG1 is an orphan G-protein coupled receptor (GPCR) located on  
 CC chromosome 12. RAIG1 shows a restricted expression pattern compared to a  
 CC related receptor, GPCR5B, which is widely expressed in peripheral and  
 CC

the method of the invention for screening for and/or diagnosis of carcinoma in a subject, and/or monitoring the effectiveness of carcinoma therapy. The method comprises detecting and/or quantifying in a biological sample obtained from the subject an RAIG1 polypeptide and a nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule are useful in the manufacture of a medicament for the treatment of carcinoma, where the composition is a vaccine. An agent which interacts with or causes change in the expression or activity of an RAIG1

CC polypeptide or nucleic acid molecule, is also useful in the manufacture  
CC of a medicament for the treatment of carcinoma that is breast cancer,  
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon  
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and  
CC screening of such carcinomas.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX
XX New isolated antigenic peptides e.g., for G protein-coupled receptors
PT (GPCR), useful for diagnosing and designing drugs for treating conditions
PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
PT autoimmune diseases.
XX
XX Disclosure; Fig 1; 523pp; English.
XX
XX The present invention describes antigenic peptides (I) comprising: (a)
CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
CC acids. Also described: (1) an assay for the detection of a particular G
CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; or
CC and (2) an isolated antibody having high specificity and high affinity or
CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in
CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an
CC antibody against a particular GPCR, and in the production of specific
CC antibodies. The peptides and antibodies are also useful for detecting the
CC presence or absence of corresponding GPCRs. The antigenic peptides for
CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC treating immune-related diseases, growth-related diseases, cell
CC regeneration-related disease, immunological-related cell proliferative
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
CC inflammation, allergies, Crohn's disease, diabetes, graft versus host
CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,
CC anxiety, depression, schizophrenia, dementia, mental retardation, memory
CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, or
CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or
CC any other disorder in which GPCRs are involved. The antibodies may be
CC used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode
CC GPCR proteins given in ABP81675 to ABP82018, which are used in the
CC exemplification of the present invention

XX New nucleic acid molecule encoding a human G-protein coupled receptor,

PT RAI3, useful for preventing, treating or ameliorating chronic obstructive  
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms  
PT of COPD.

XX Claim 21; SEQ ID NO 18; 301pp; English.

XX The present sequence is that of cDNA encoding a human G-protein coupled  
PS receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).  
XX Proteomics methods were used to isolate cigarette smoke-inducible  
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was  
CC identified as being tyrosine phosphorylated and/or as being  
CC associated/complexed with tyrosine phosphorylated proteins only in those  
CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily  
CC expressed in lung tissue, and since cigarette smoke is a major causative  
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a  
CC novel cellular target for identifying modulators, e.g. agonists or  
CC antagonists, useful for the treatment and/or prevention of COPD and  
CC related disorders such as emphysema and chronic bronchitis. RAI-3  
CC modulators, e.g. agonists and antagonists, especially antisense  
CC compounds, can be used to treat COPD and other disorders and diseases  
CC associated with regulation of NF-kB and/or its associated or interacting  
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in  
CC the RAI-3 gene are useful for determining COPD association in  
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for  
CC preventing, treating or ameliorating disorders related to aberrant GPCR  
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory  
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related  
CC disorders or conditions, autoimmune disorders, disorders related to  
CC hyperimmune activity, inflammatory conditions, disorders related to  
CC aberrant acute phase responses, hypercongenital conditions, birth  
CC defects, necrotic lesions, wounds, organ transplant rejection, renal  
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders  
CC related to aberrant signal transduction, proliferation disorders,  
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,  
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic  
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,  
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,  
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,  
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders  
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,  
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or  
CC regulation (all claimed).

PT a protein found in breast, lung, colon, or kidney tissue.  
XX  
PS Claim 2; SEQ ID NO 2; 220pp; English.  
XX  
CC The present invention describes a method for diagnosing and treating a  
CC cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises  
CC detecting and blocking the over expression of a gene of a protein found  
CC in breast, lung, colon, or kidney tissue. Also described is an antibody  
CC or binding portion of an antibody that specifically binds a protein found  
CC in breast tissue, lung tissue, colon tissue, or kidney tissue. The  
CC antibody has cytostatic activity, and can be used in gene therapy. The  
CC methods, antibodies, polynucleotides and polypeptides from the present  
CC invention are useful for detecting, diagnosing, preventing and treating  
CC cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence  
CC represents a nucleotide sequence given in the present invention, which is  
CC over expressed in human breast tumour tissue. N.B. All 385 sequences  
CC referenced in this patent are detailed in the US provisional application  
CC SN 60/447,900, filed 02/13/2003. In this application only one sequence,  
CC representing the longest sequence of each of the 65 clones is listed in  
CC Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX New nucleic acid, and derived proteins, useful for diagnosis of bronchial  
PT cancer and in screening for therapeutic and diagnostic agents.  
XX  
PS Claim 1; SEQ ID NO 350; 1381pp; German.  
XX  
CC This invention relates to a novel isolated nucleic acid associated with  
CC bronchial cancer comprising 489 defined sequences given in the  
CC specification. The invention may be useful for the production of  
CC compounds with a cytostatic activity through the inhibition of expression  
CC or activity of tumour-associated proteins. The novel DNA sequences and  
CC the proteins/peptides encoded by them are used for detecting bronchial  
CC cancer or determining the risk of developing it and to screen for  
CC specific binding partners of the DNA or protein sequences, where the  
CC binding partners are potentially useful as agents for treating or  
CC diagnosing bronchial cancer. The DNA or protein sequences can also be  
CC used for prognosis, detection of metastases and for secondary treatment  
CC (of tumours that have been stabilised or are no longer detectable).  
CC Detecting abnormal expression of the DNA sequences provides early  
CC diagnosis of bronchial cancers. The present sequence is that of a novel  
CC bronchial cancer-associated human gene sequence of the invention.

XX PT Determining susceptibility of an individual to joint space narrowing,
XX PT osteophyte development and/or joint pain comprises identifying whether
XX PT the individual has at least one polymorphism in a polynucleotide encoding
XX PT a protein.
XX PS Disclosure; SEQ ID NO 33; 287bp; English.
XX CC
XX CC The invention relates to a method of determining susceptibility of an
XX CC individual to joint space narrowing and/or osteophyte development and/or
XX CC joint pain comprising identifying whether the individual has at least one
XX CC polymorphism in a polynucleotide encoding at least one of the protein
XX CC listed in the specification. The methods, composition and agent are
XX CC useful for modulating the susceptibility of an individual to joint space
XX CC narrowing and/or osteophyte development and/or joint pain that is
XX CC associated with a disease, preferably osteoarthritis. The cell line and
XX CC the non-human animal are useful for screening for an agent for diagnosing
XX CC an individual having susceptibility to joint space narrowing and/or
XX CC osteophyte development and/or joint pain. This sequence corresponds to
XX CC the polynucleotide encoding a protein listed in the specification. (Note:
XX CC The sequence data for this patent did not form part of the printed
XX CC specification but was obtained in electronic format directly from WIPO at
XX CC ftp.wipo.int/pub/published_pct_sequences).

XX	New isolated nucleic acid molecule, useful for drug screening and
XX	toxicity assays or for assessing the impact, including toxicity, of a
PT	compound, pharmaceutical agent or environmental pollutant on a cell or
PT	living organism.
XX	Claim 1; SEQ ID NO 7831; 4lpp; English.
PS	This invention is related to a novel isolated canine nucleic acid
XX	sequences and the construction of canine microarrays containing a
CC	significant portion of the canine genome. The isolated canine nucleic
CC	acid sequences of the invention may be useful for drug screening and
CC	toxicity assays. The invention is therefore useful for assessing the
CC	impact, including toxicity, of a compound, pharmaceutical agent or
CC	environmental pollutant on a cell or living organism. The methods are
CC	useful for detecting genes that are up- or down-regulated in canines in a
CC	disease state. The sequences are useful as diagnostic agents or markers
CC	to detect a cellular response in a sample individually or as part of a
CC	gene expression profile. It is also useful as a target for agents that
CC	modulate gene expression or activity. The database is useful for
CC	producing electronic Northern blots that allow the user to determine the cell
CC	type or tissue in which a given gene is expressed and to allow
CC	determination of the abundance or expression level of a given gene in a
CC	particular tissue or cell. The methods are useful for determining the
CC	similarity of a toxic response to one or more individual compounds. The
CC	methods are useful for predicting at least one toxic response or the
CC	likelihood that a compound or test agent will induce various specific
CC	pathologies such as those of the liver (liver necrosis), fatty liver
CC	disease, protein adduct formation or hepatitis), those of the kidney,
CC	heart, brain or testes, or other pathologies associated with at least one
CC	of the toxins. The methods are also useful for predicting or elucidating
CC	the potential cellular pathways influenced, induced or modulated by the
CC	compound or test agent due to the similarity of the expression profile
CC	compared to the profile induced by a known toxin. The present sequence is
CC	that of a canine DNA sequence which was claimed for use during the
CC	production of a canine microarray of the invention.

XX	Novel polynucleotide comprising Bifidobacterium genome sequence useful as
PT	a probe or primer for detecting and/or identifying Bifidobacterium longum
PT	in a biological sample.
XX	Disclosure; SEQ ID NO 1101; 80pp; English.
PS	The present invention describes a polynucleotide (I) comprising a
CC	sequence of a Bifidobacterium genome selected from the nucleotide
CC	sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at
CC	least 90% identity or which hybridises with the sequences given in
CC	ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a
CC	fusion protein, comprising a sequence selected from 1097 sequences given
CC	in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a
CC	heterologous polypeptide. (I) has antidiarrheic and antibacterial
CC	activities, and can be used as an inhibitor of Salmonella. (I) (which is
CC	a probe) is useful for the detection and/or identification of
CC	Bifidobacterium longum in a biological sample. A carrier containing the
CC	lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be
CC	used for preventing and/or treating diarrhoea brought about by pathogenic
CC	bacteria and/or rotavirus. The carrier is a food composition selected
CC	from milk, yogurt, curd, cheese, fermented milks, milk based fermented
CC	products, ice-creams, fermented cereal based products, milk based
CC	powders, infant formula, pet food or a pharmaceutical composition
CC	selected from tablets, liquid bacterial suspensions, dried oral
CC	supplement, wet oral supplement, dry tube feeding or wet tube feeding.
CC	(I) is useful in DNA arrays or chips to carry out analysis of the
CC	expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent
CC	Bifidobacterium related nucleotide sequences given in the Sequence
CC	Listing from the present invention but not mentioned further within the
CC	specification. N.B. The sequence data for this patent is not represented
CC	in the printed specification but is based on sequence information
CC	supplied by the European Patent Office

XX
XX New promoter region from a Mycoplasma gallisepticum adhesin gene - useful
PT when coupled to foreign antigen gene, for prodn. of multivalent live
PT vaccines, also new probes for detecting Mycoplasma and manipulating its
PT genome.
XX
XX Claim 2; Page 46-48; 81pp; English.
XX
XX A 10 kb DNA fragment was isolated from a Mycoplasma gallisepticum genomic
CC library using probes (AAT51533-34) based on tryptic peptides of a M.
CC gallisepticum PMGA adhesin. The fragment was divided into 5 putative
CC genes, PMGA1.2, PMGA1.3, PMGA1.4 and PMGA1.5/1.6 (AAT51535-38) on the
CC basis of deduced amino acids sequences. The 5 genes are closely related.
CC The regions between the genes (see also AAT51539-42) are highly
CC conserved. A consensus conserved sequence (AAT51532) can be used as a
CC probe to detect Mycoplasma infection, esp. in poultry. The promoter
CC sequences found in the conserved sequences may be linked to exogenous
CC antigen genes for prodn. of multivalent live vaccines. (Updated on 16-OCT
CC -2003 to standardise OS field)

XX New genome of Legionella pneumophila Paris strain and derived  
PT polypeptides, useful for detection or identification of the strain and  
PT for treatment and prevention of infections.

XX Claim 1; SEQ ID NO 50; 660pp; English.

XX The invention relates to an isolated or purified nucleotide sequences (I)  
CC from Legionella pneumophila Paris strain (II), and their related  
CC sequences or fragments, are useful as primers and probes for detection  
CC and amplification, including differentiation between the Paris and  
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant  
CC (hybrid) polypeptides (III). (II) are also useful for preparation of  
CC specific antibodies (Ab), also used for detection/identification of  
CC Legionella, and some (I), specifically those involved in synthesis of  
CC surface proteins, are targets for identification of inhibitors. (II), or  
CC vectors that contain (I), are useful as vaccines and immunogenic  
CC compositions, for treatment and prevention of infections by L.  
CC pneumophila. The present sequence represents a L. pneumophila DNA.

CC Philadelphia strains of Legionella pneumophila and to prepare recombinant  
CC (hybrid) polypeptides (III). (II) are also useful for preparation of  
CC specific antibodies (Ab), also used for detection/identification of  
CC Legionella, and some (I), specifically those involved in synthesis of  
CC surface proteins, are targets for identification of inhibitors. (II), or

CC vectors that contain (I), are useful as vaccines and immunogenic  
CC compositions, for treatment and prevention of infections by L.  
CC pneumophila. The present sequence represents a L. pneumophila DNA.

PT preferably Chlamydia pneumoniae, and for diagnostic purposes.  
XX  
PS Claim 5; Page 176; 364pp; English.  
XX  
CC Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia  
CC pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding  
CC them. The proteins are predicted to be immunogenic and may therefore be  
CC useful in vaccine production and for diagnostic purposes. Chlamydia  
CC pneumoniae is a common cause of respiratory disease in humans, and is  
CC also involved in the development of cardiovascular diseases such as

CC atherosclerosis, coronary artery disease, carotid artery stenosis,  
CC myocardial infarction, cerebrovascular disease, aortic aneurysm,  
CC claudication and stroke. The proteins and nucleic acids of the invention  
CC may be used in vaccines and pharmaceutical compositions for the  
CC prevention or treatment of chlamydial infections, particularly Chlamydia  
CC pneumoniae infections. The proteins may also be used in the detection of  
CC Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched  
CC DNA probe assay or blotting techniques for determining Chlamydia  
CC pneumoniae gene expression. The present sequence represents a  
CC specifically claimed DNA which encodes a Chlamydia pneumoniae protein of  
CC the invention. (Updated on 29-AUG-2003 to standardise OS field)

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-451930/48.
XX
XX New cardiovascular system related polynucleotides and polypeptides,
XX useful for diagnosing, treating and/or preventing disorders of the
XX cardiovascular system.
XX
XX Claim 1; SEQ ID NO 1560; 674pp; English.
XX
XX Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode
XX the cardiovascular system antigen polypeptides of the invention.
XX Cardiovascular system antigens and their associated polynucleotides are
XX useful in the diagnosis, treatment and prevention of various types of
XX disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
XX chickens or sheep. A pathological condition can be determined by
XX detecting the presence or absence of a mutation in a cardiovascular
XX system antigen polynucleotide. The treatable disorders include autoimmune
XX diseases such as rheumatoid arthritis, hyperproliferative disorders such
XX as neoplasms of the breast or liver, cardiovascular disorders such as
XX cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,
XX nervous system disorders such as Alzheimer's disease, infections caused
XX by bacteria, viruses and fungi, ocular disorders such as corneal
XX infection, endocrine disorders such as premature labour and infertility,
XX gastrointestinal disorders such as Crohn's disease, renal disorders such
XX as glomerulonephritis and respiratory disorders such as asthma and
XX pleurisy. The polypeptides can also be used to aid wound healing, to
CC prevent skin aging due to sunburn, to maintain organs before
CC transplantation, to regenerate tissues and in chemotaxis. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Ruben SM, Barash SC;
XX WPI; 2003-743766/70.
XX
XX New cardiovascular system related polynucleotides and polypeptides,
XX useful for preventing, treating, or ameliorating a medical condition,
XX such as cancer of cardiovascular tissues and cancer metastases.
XX
XX Claim 1; SEQ ID NO 1560; 262pp; English.
XX
XX The invention relates to human cardiovascular system related polypeptides
XX and the polynucleotides encoding them. The polypeptides, polynucleotides
XX and antibodies to the polypeptides are useful for diagnosing a
XX pathological condition or a susceptibility to a pathological condition,
XX for preventing, treating, or ameliorating a medical condition, such as
XX cancer of cardiovascular system tissues, proliferative disorders, foetal
XX and developmental abnormalities, haematopoietic disorders, diseases of
XX the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
XX arthritis), inflammation, allergies, neurological disorders (e.g.,
XX Alzheimer's disease, Parkinson's disease), cognitive disorders,
XX schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
XX diabetes, atherosclerosis, cardiovascular disorders, angiogenic
XX disorders, kidney disorders, gastrointestinal disorders, pregnancy-
XX related disorders, endocrine disorders and infections. The nucleic acids
XX are also useful for chromosome identification, radiation hybrid mapping
XX or long-range restriction mapping. The polypeptides and polynucleotides
XX may also be used as food additives or preservatives to increase or
XX decrease storage capabilities, fat content or other nutritional
XX components. This sequence represents human cardiovascular system related
XX genomic DNA of the invention.

XX PT Pharmaceutical composition for treating ailments associated with impaired

XX PT respiration, has oligo(s) antisense to specific gene(s) or its

XX PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or

XX PT ubiquinone.

XX PS Disclosure; SEQ ID NO 5350; 872pp; English.

XX CC The invention relates to a novel pharmaceutical composition, which has a

XX CC first active agent comprising an oligonucleotide antisense to the

XX CC initiation codon, coding region, 5' or 3' end genomic flanking regions,

XX CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of

XX CC junctions of genes encoding a polypeptide associated with lung and/or

XX CC nasal airway dysfunction and a second active agent comprising an

XX CC anti-inflammatory steroid and ubiquinone. A composition of the invention

XX CC has anti-inflammatory, antiallergic, antiasthmatic, hypotensive,

XX CC immunosuppressive, and cytosolic activity. The composition may have a

XX CC use in antisense gene therapy. The composition is useful for treating or

XX CC preventing a respiratory, lung or malignant disease or condition, also

XX CC for enhancing the prophylactic or therapeutic respiratory effect of an

XX CC anti-inflammatory steroid in a subject, for reducing or depleting levels

XX CC of, or reducing sensitivity to adenosine, reducing levels of adenosine

XX CC receptor, producing bronchodilation, increasing levels of ubiquinone or

XX CC lung surfactant in a subject's tissue, or treating bronchoconstriction,

XX CC lung inflammation, lung allergies, or a respiratory disease or condition.

XX CC Note: The sequence data for this patent is not represented in the printed

XX CC specification, but was obtained in electronic format directly from WIPO

XX PT Pharmaceutical composition for treating asthma, has antisense

XX PT oligonucleotide containing less percentage of adenosine, targeted to

XX PT nucleic acids associated with lung airway or lung dysfunction, and

XX PT bronchodilating agent.

XX PS Claim 15; SEQ ID NO 5350; 763pp; English.

XX CC This invention describes a novel composition (a) a first active agent,

XX CC comprising oligonucleotides, effective for alleviating

XX CC bronchoconstriction, respiratory tract inflammation, allergies and

XX CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,

XX CC surfactant depletion or hyposecretion, when administered to a mammal. The

XX CC oligonucleotides are derived from a gene encoding or regulating

XX CC expression of a target polypeptide associated with lung airway or lung

XX CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.

XX CC The invention also describes a kit, that comprises: (a) a delivery

XX CC device, in separate containers, (b) the oligonucleotides, (c)

XX CC instructions for adding a carrier and for use of the kit. The composition

XX CC of the invention has antiallergic, anti-inflammatory, antiasthmatic,

XX CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a

XX CC beta-adrenergic agonist. The composition is useful for preventing or

XX CC treating a respiratory, lung or malignant disease. The administered

XX CC composition comprises oligo and is administered to reduce the production

XX CC or availability, or to increase the degradation of the target mRNA or to

XX CC reduce the amount of target polypeptide present in the lungs. The

XX CC pulmonary obstruction, and/or bronchoconstriction and/or lung

XX CC inflammation, allergies and/or surfactant hypoproduction are associated

XX CC with a disease or condition such as pulmonary vasoconstriction,

XX CC inflammation, allergies, asthma, impeded respiration, respiratory

XX CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary

XX CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary

XX CC transplantation rejection, pulmonary infections, bronchitis or cancer.

XX CC The reduced adenosine content of the anti-sense oligos corresponding to

XX CC thymidines present in the target RNA serves to prevent the breakdown of

PS	Claim 6; SEQ ID NO 1; 22pp; Chinese.
XX	
CC	The invention relates to the isolation of human formamido pyrimidine-DNA
CC	glycosylase 11.77, and the polynucleotide sequence encoding it. Also
CC	described is the preparation of the protein by DNA recombination, the
CC	application of the polypeptide in treating diseases (e.g. cancer, HIV
CC	infection, and immunopathy), the antagonist of the polypeptide and its
CC	medical action, and the application of the polynucleotide. This sequence
CC	encodes human formamido pyrimidine-DNA glycosylase 11.77.

XX  
XX Claim 1; SEQ ID NO 392; 1012pp + Sequence Listing; English.  
XX  
XX The invention relates to an isolated polynucleotide (I) comprising a  
CC nucleotide sequence selected from any of 948 sequences (ABZ11119-  
CC ABZ12066) or their mature protein coding portion, active domain coding  
CC protein or complementary sequences. The polynucleotides are useful for  
CC identifying expressed genes or for physical mapping of human genome. The  
CC encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight  
CC markers, as a food supplement, for generating antibodies, in medical  
CC imaging, screening and diagnostic assays and for treating cell-  
CC proliferative disorders (cancer), neurodegenerative diseases (Parkinson's  
CC or Alzheimer's disease), autoimmune diseases (multiple sclerosis,  
CC diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,  
CC platelet or coagulation disorders, wound, burns, incision, ulcers, liver  
CC or lung fibrosis, infections (bacterial, viral, fungal, parasitic),  
CC arthritis, etc. Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic format  
CC directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX Disclosure; SEQ ID NO 392; 51pp; English.

XX The invention relates to an isolated polynucleotide. The methods and  
CC compositions of the present invention are useful for the diagnosis and/or  
CC treatment of diseases or conditions associated with aberrant expression  
CC or activity of the arginine-rich protein-like polypeptides, such as  
CC cancer and inflammation. They can also be used in forensics, gene  
CC mapping, identification of mutations responsible for genetic disorders,  
CC and in assessing biodiversity. The present sequence represents a novel  
CC human arginine-rich protein cDNA.

XX New Proteus mirabilis polypeptides and polynucleotides, useful as
reagents for diagnosis of bacterial disease, as components of
antibacterial vaccines, as targets for antibacterial drugs, or as
biocontrol agents for plants.
XX
XX Disclosure; SEQ ID NO 1420; 870pp; English.
XX
XX The invention relates to new Proteus mirabilis polypeptides and
polynucleotides. The invention also relates to antibodies against the
polypeptides, methods for producing the polypeptides, a method of
generating vaccines for immunising an individual against P. mirabilis, a
method for evaluating a compound for the ability to bind a P. mirabilis
polypeptide and a method for screening test compounds for anti-bacterial
activity. The polypeptides and polynucleotides are useful as molecular
targets for diagnosing, preventing and treating pathological conditions
resulting from bacterial infection, as reagents for diagnosis of
bacterial diseases, as components of antibacterial vaccines, as targets
for antibacterial drugs or as bio-control agents for plants. This
sequence represents a Proteus mirabilis polynucleotide of the invention.

PT New Interleukin-3 useful for treating conditions requiring increases in
PT numbers or differentiation of hematopoietic cells, e.g. autoimmune
PT diseases, leukopenia.
XX
PS Claim 1; Fig 2; 158pp; English.
XX
CC This sequence encodes the novel interleukin-3 (IL-3) of the invention.
CC This sequence was isolated from the human foetal liver-spleen tissue cDNA
CC library b2HFLS20W. The IL-3 polypeptides are useful in vitro for
CC stimulating growth and activation of bone marrow and blood cells before
CC infusion of these cells into patients. They can be used to treat various
CC immunodeficiencies (e.g. resulting from viral infection) or immune
CC disorders (e.g. rheumatoid arthritis) or other conditions in which
CC haematopoietic cell populations have been reduced/destroyed e.g. due to
CC radiation or chemotherapy. They are especially useful to activate mature
CC myeloid and/or lymphoid cells and especially to treat leukopaenia. The
CC polypeptides can also be used to stimulate differentiation in
CC haematopoietic precursor cells, especially haematopoietic stem or
CC progenitor cells, lymphoid cells or myeloid (especially monocyte) cells,
CC e.g. the differentiation of haematopoietic precursor cells into dendritic-
CC like cells. This is useful in vivo to increase the number of dendritic-
CC like cells to enhance the immune response against infections and diseases
CC e.g. to treat pathogenic infections, autoimmune diseases and in
CC transplantation; in vitro production of dendritic cells is useful
CC clinically (e.g. in vaccine development) since isolation of these cells
CC from tissues is difficult. IL-3 can be combined with a carrier in
CC compositions useful as above, and used to generate antibodies useful in
CC assays and therapeutically. The polynucleotides are useful e.g. as
CC hybridisation probes, as oligomers for PCR, for chromosome and gene
CC mapping and for polypeptide production

XX DR Novel biallelic markers useful for detecting conditions and genotypes  
XX PT associated with arachidonic acid metabolism.  
XX PS Claim 13; Page 566; 802pp; English.

XX The present invention describes polynucleotides including biallelic  
CC markers derived from genes involved in arachidonic acid metabolism and  
CC from genomic regions flanking those genes. Methods from the present  
CC invention may be used to select individuals for clinical trials and  
CC predict responses to treatment with drugs. The polynucleotides may be  
CC used in hybridisation assays, sequencing assays and specific  
CC amplification assays for identifying an eicosanoid-related biallelic  
CC marker (ERBM) or 12-LO-related biallelic marker, and for amplifying a  
CC segment of nucleotides containing an ERBM. The polynucleotides are useful  
CC in diagnostic kits. The markers may be used to detect conditions and  
CC genotypes associated with arachidonic acid metabolism. AAC57367 to  
CC AAC58018 and AAB24019 and AAB24020 represent sequences used in the  
CC exemplification of the present invention. N.B. Polymorphic bases (single  
CC nucleotide polymorphisms also known as SNPs) in the polynucleotide  
CC sequences from the present invention have been given as their  
CC corresponding degenerate bases e.g. a polymorphic base of C or T has been  
XX given as Y

XX New DNA and proteins comprising a portion of a Chlamydia antigen, useful  
PT for diagnosing or treating Chlamydial infections, particularly as  
PT vaccines for treating or preventing Chlamydial infections, e.g. pelvic  
PT inflammatory disease.  
XX Example 1; SEQ ID NO 6; 275pp; English.  
XX The present invention describes compounds and methods for diagnosing and  
CC treating Chlamydia infection. Chlamydia polynucleotide and protein  
CC sequences have antibiotic, antiinflammatory, antiinfertility, cardiant,  
CC antiarteriosclerotic and ophthalmological activities, and can be used in  
CC vaccines, and in gene therapy. The Chlamydia polynucleotides, proteins,  
CC compositions or methods from the present invention can be used for the  
CC serodiagnosis or treatment of Chlamydial infections, particularly in  
CC humans. The polynucleotides, proteins or compositions are particularly  
CC useful for stimulating an immune response in a patient, or for  
CC stimulating and/or expanding T cells specific for a Chlamydia protein.  
CC Specifically, the polynucleotides, proteins or compositions are useful as  
CC vaccines for treating or preventing Chlamydial infections including  
CC pelvic inflammatory disease (which results in tubal obstruction and  
CC infertility in women), male infertility, ocular infection (which may  
CC cause blindness), acute respiratory tract infections, atherosclerosis, or

XX Claim 1; SEQ ID NO 33479; 21pp + Sequence Listing; English.  
XX The invention relates to an isolated nucleic acid detection reagent  
CC capable of detecting 1000 or more genes from Drosophila. The invention is  
CC useful in developmental biology and in elucidating cell signalling and  
CC cell-cell interactions in higher eukaryotes for the development of  
CC insecticides, therapeutics and pharmaceutical drugs. The invention  
CC discloses genomic DNA sequences (ABU16176-ABU30511), expressed DNA  
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-  
CC ABB72072). The sequence data for this patent did not form part of the  
CC printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX
XX Combination useful for preparing a composition for treating liver
PT disorders associated with steroid therapy, e.g., cirrhosis or hepatitis,
PT comprises cDNAs that are differentially expressed in response to steroid
PT treatment.
XX
XX Claim 1; SEQ ID NO 637; 141pp; English.
XX
XX The invention relates to a combination comprising cDNAs that are
XX differentially expressed in response to steroid treatment. Also included
XX are the following: a high throughput method for using a cDNA to detect
XX differential expression of nucleic acids in a sample; and a high
XX throughput method of screening molecules or compounds to identify a
XX ligand that specifically binds a cDNA. The sample is from a subject with
XX Wilson disease and comparison of a standard defines a stage of that
XX disease. The high throughput method of screening molecules or compounds
XX to identify a ligand that specifically binds a cDNA comprises: combining
XX the combination with molecules or compounds under conditions to allow
XX specific binding; and detecting specific binding between each cDNA and at
XX least one molecule or compound. The molecules or compounds are regulatory
XX proteins. The combination is useful for preparing a composition for
XX treating liver disorders associated with steroid therapy, e.g., cirrhosis
XX or hepatitis. The present sequence represents a human cDNA which is
XX differentially expressed in steroid-induced C3A liver cells. Note: The
XX sequence data for this patent did not form part of the printed
XX specification but was obtained in electronic format directly from USPTO
XX at seqdata.uspto.gov/sequence.html.

XX New antisense nucleic acids, useful for identifying proteins or screening  
 PT for homologous nucleic acids required for cellular proliferation to  
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 14; SEQ ID NO 18427; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
 CC proliferation or the activity of a gene in an operon required for  
 CC proliferation; (7) identifying a compound that influences the activity of

CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC compound's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target  
 CC prokaryotic essential genes. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from WIPO at

```
PT contacted with the test compound.
XX Claim 10; SEQ ID NO 167; 39pp; English.
XX This invention relates to a novel screening method identified as a multi-
CC parameter high throughput screening (MPHTS) assay. Specifically, it
CC refers to an assay that utilizes the disease signature of a plurality of
CC specific genes associated with a particular disease, and identifies
CC differential expression between those cells taken from individuals
CC affected by that disease and those that are not affected. The present
CC invention then describes the screening of candidate pharmaceutical
CC compounds to identify those that have a potential therapeutic benefit for
CC the treatment of neuropsychiatric and neurodegenerative disorders
CC including schizophrenia, bipolar affective disorder (BAD) and autism, as
CC well as Parkinson's and Alzheimer's disease. Accordingly, the compounds
CC of this invention exhibit various activities including neuroleptic,
CC nootropic, antimanic and antidepressant. Furthermore, the screening
CC method used in MPHTS will be automated, such that a large number of test
CC compounds may be rapidly screened with a minimal amount of labour and
CC effort. This polynucleotide is a cDNA sequence of a gene that is
CC differentially expressed in rats in the presence of the therapeutic
CC compound VIP (vasoactive intestinal polypeptide) given in an
CC exemplification of the invention.

PS  
XX The invention relates to a novel method of predicting at least one toxic  
CC effect of a compound. The method comprises a gene expression profile of a  
CC tissue or cell sample exposed to the compound, and comparing the gene  
CC expression profile to a database comprising at least part of the data or  
CC information given in the specification. The methods are useful for  
CC predicting at least one toxic effect of a compound, predicting the  
CC progression of a toxic effect of a compound, predicting the renal  
CC toxicity of a compound, or identifying toxicity markers in tissues or  
CC cells exposed to known renal toxin. The genes are useful as toxicity  
CC markers in drug screening and toxicity assays, in monitoring disease or  
CC physiological states, or disease progression. This polynucleotide  
CC represents a rat DNA sequence relating to the toxic effect database  
CC described in the specification. NOTE: The sequence data for this patent  
CC did not form part of the printed specification, but was obtained in  
CC electronic format directly from the World Intellectual Property  
CC Organization

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime  
 end enriched, double-strand cDNA was digested with Not I and cloned  
 into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library  
 was normalized. Library was constructed by Life Technologies, a  
 division of Invitrogen. This sequence belongs to sequence cluster  
 6601.f

/notes="Vector: Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker containing an oligodT sequence preceded by a synthetic NotI site (first strand primer: 5'-GACTAGTCTAGATCGGAGCGGCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at: http://www.openbiosystems.com/cdna\_library\_construction\_fa q.php#8 The primary library was transformed and amplified in DH10B (T1 phage resistant) bacteria. Clones available from Open Biosystems: http://www.openbiosystems.com/stickleback"

Email: msekic@rc.riken.go.jp  
 An Arabidopsis full-length cDNA library was constructed essentially  
 as reported previously (Seki et al., 1998). cDNA cleaved with BamHI  
 and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et  
 al., submitted for publication) digested with BamHI and SalI. This  
 site is in a modified pluscript vector. Please visit our web  
 site ([http://www.gsc.riken.go.jp/e/plant/index\\_e.html](http://www.gsc.riken.go.jp/e/plant/index_e.html)) for further  
 details.

   /note="Vector: lambda ZAP Express/pBK-CMV; Site_1: EcoRI
(5' adaptor); Site_2: XhoI (3' linker primer); The mixed
organ cDNA library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a 50 bp linker primer containing an oligo dT sequence
preceded by a synthetic XhoI site. 5 prime adaptors were
used containing an EcoRI cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidirectionally in the sense orientation with respect to
the lacZ promoter of pBK-CMV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.
